

第 24 章 : 非正弦波交流

- 24.1 非正弦波交流
- 24.2 正弦波の組み合わせと波形
- 24.3 フーリエ級数による非正弦波の展開

キーワード : 対称波, 奇関数波, 偶関数波

学習目標 : 対称波, 奇関数波, 偶関数波のフーリエ級数を計算できる。

1

[問題30.1](1)

$$\omega = \frac{2\pi}{T}$$

$$f(t) = a_0 + \sum_{n=1}^{\infty} a_n \cos n\omega t + \sum_{n=1}^{\infty} b_n \sin n\omega t$$

【解法1】偶関数とは知らずに求める

a_0 を求める

$$\begin{aligned} a_0 &= \frac{1}{T} \int_0^T v(t) dt = \frac{1}{T} \left(\int_0^{T/4} A dt + \int_{3T/4}^T A dt \right) \\ &= \frac{A}{T} \left([t]_0^{T/4} + [t]_{3T/4}^T \right) = \frac{A}{T} \left(\frac{T}{4} + \frac{T}{4} \right) = \frac{A}{2} \end{aligned}$$

2

a_n を求める

$$\begin{aligned} a_n &= \frac{2}{T} \int_0^T v(t) \cos n\omega t dt \\ &= \frac{2}{T} \left(\int_0^{T/4} A \cos n\omega t dt + \int_{3T/4}^T A \cos n\omega t dt \right) \\ &= \frac{2A}{T} \left(\left[\frac{1}{n\omega} \sin n\omega t \right]_0^{T/4} + \left[\frac{1}{n\omega} \sin n\omega t \right]_{3T/4}^T \right) \quad \omega T = 2\pi \text{ より} \\ &= \frac{2A}{n\omega T} \left(\sin n\omega \frac{T}{4} - \sin 0 + \sin n\omega T - \sin n\omega \frac{3T}{4} \right) \\ \omega T &= 2\pi \text{ より} \\ a_n &= \frac{2A}{2\pi n} \left(\sin \frac{2\pi n}{4} + \sin \frac{2\pi n}{4} - \sin \frac{6\pi n}{4} \right) \\ &= \frac{A}{\pi n} \left(\sin \frac{\pi n}{2} - \sin \frac{3\pi n}{2} \right) = \frac{2A}{\pi n} \sin \frac{\pi n}{2} \\ &= \sin \frac{\pi n}{2} \end{aligned}$$

3

b_n を求める

$$\begin{aligned} b_n &= \frac{2}{T} \int_0^T v(t) \sin n\omega t dt \\ &= \frac{2}{T} \left(\int_0^{T/4} A \sin n\omega t dt + \int_{3T/4}^T A \sin n\omega t dt \right) \\ &= \frac{2A}{T} \left(\left[-\frac{1}{n\omega} \cos n\omega t \right]_0^{T/4} + \left[-\frac{1}{n\omega} \cos n\omega t \right]_{3T/4}^T \right) \\ &= \frac{2A}{n\omega T} \left(\cos n\omega \frac{T}{4} - \cos 0 + \cos n\omega T - \cos n\omega \frac{3T}{4} \right) \\ \omega T &= 2\pi \text{ より} \\ b_n &= \frac{2A}{2\pi n} \left(\cos \frac{2\pi n}{4} - 1 + \cos 2\pi n - \cos \frac{6\pi n}{4} \right) \\ &= \frac{A}{\pi n} \left(\cos \frac{\pi n}{2} - \cos \frac{3\pi n}{2} \right) = 0 \\ &= 0 \quad = 0 \end{aligned}$$

4

$$\begin{aligned} a_1 &= \frac{2A}{\pi} \sin \frac{\pi}{2} = \frac{2A}{\pi} \\ a_2 &= \frac{2A}{2\pi} \sin \frac{2\pi}{2} = 0 \\ a_3 &= \frac{2A}{3\pi} \sin \frac{3\pi}{2} = -\frac{2A}{3\pi} \end{aligned}$$

よって

$$v(t) = \frac{A}{2} + \frac{2A}{\pi} \left(1 \cdot \cos \omega t - \frac{1}{3} \cos 3\omega t + \frac{1}{5} \cos 5\omega t + \dots \right)$$

5

【解法2】偶関数を使う

偶関数より $b_n = 0$

a_0 を求める

(A1)

$$a_0 = \frac{1}{T} \int_0^T v(t) dt = \frac{1}{T} \left(\int_0^{T/4} A dt + \int_{3T/4}^T A dt \right)$$

(A2) 半周期を2倍

$$a_0 = \frac{2}{T} \int_0^{T/2} v(t) dt = \frac{2}{T} \int_0^{T/4} A dt \quad \leftarrow \text{半周期が使える}$$

(A3) 周期を $-\frac{T}{4} \sim \frac{3T}{4}$ と考える

$$a_0 = \frac{1}{T} \int_{-\frac{T}{4}}^{\frac{3T}{4}} v(t) dt = \frac{1}{T} \int_{-\frac{T}{4}}^{\frac{T}{4}} A dt$$

6

(解法1)で解く

$$a_0 = \frac{A}{T} \left([t]_0^{\frac{T}{4}} + [t]_{\frac{3T}{4}}^T \right) = \frac{A}{T} \left(\frac{T}{4} + \frac{T}{4} \right) = \frac{A}{2}$$

(解法2)で解く

$$a_0 = \frac{2A}{T} [t]_0^{\frac{T}{4}} = \frac{2A}{T} \cdot \frac{T}{4} = \frac{A}{2}$$

(解法3)で解く

$$a_0 = \frac{A}{T} [t]_{-\frac{T}{4}}^{\frac{T}{4}} = \frac{A}{T} \left(\frac{T}{4} + \frac{T}{4} \right) = \frac{A}{2}$$

7

(A2)半周期で解く * (A1)全周期との違いを示す

$$a_n = \frac{2}{T} \int_0^T v(t) \cos n\omega t \, dt$$

$$= \frac{2}{T} \left(\int_0^{\frac{T}{4}} A \cos n\omega t \, dt + \int_{\frac{3T}{4}}^T A \cos n\omega t \, dt \right)$$

$$= \frac{2}{T} \left(\left[\frac{1}{n\omega} \sin n\omega t \right]_0^{\frac{T}{4}} + \left[\frac{1}{n\omega} \sin n\omega t \right]_{\frac{3T}{4}}^T \right)$$

$$= \frac{2}{n\omega T} \left(\sin n\omega \frac{T}{4} - \sin 0 + \sin n\omega T - \sin n\omega \frac{3T}{4} \right)$$

$\omega T = 2\pi$ より

$$a_n = \frac{2}{2\pi n} \left(\sin \frac{2\pi n}{4} + \sin 2\pi n - \sin \frac{6\pi n}{4} \right)$$

$$= \frac{2}{\pi n} \left(\sin \frac{\pi n}{2} + \sin \frac{3\pi n}{2} \right) = \frac{2A}{\pi n} \sin \frac{\pi n}{2}$$

8

(A3)で解く * (A1)との違いを示す

$$a_n = \frac{2}{T} \int_0^T v(t) \cos n\omega t \, dt$$

$$= \frac{2}{T} \left(\int_0^{\frac{T}{4}} A \cos n\omega t \, dt + \int_{\frac{3T}{4}}^T A \cos n\omega t \, dt \right)$$

$$= \frac{2A}{T} \left(\left[\frac{1}{n\omega} \sin n\omega t \right]_0^{\frac{T}{4}} + \left[\frac{1}{n\omega} \sin n\omega t \right]_{\frac{3T}{4}}^T \right)$$

$$= \frac{2A}{n\omega T} \left(\sin n\omega \frac{T}{4} - \sin 0 + \sin n\omega T - \sin n\omega \frac{3T}{4} \right)$$

$$= \frac{2A}{n\omega T} \left(\sin n\omega \frac{T}{4} - \sin \left(-n\omega \frac{T}{4} \right) + \sin n\omega T \right)$$

$\omega T = 2\pi$ より

$$a_n = \frac{2}{2\pi n} \left(\sin \frac{2\pi n}{4} + \sin 2\pi n + \sin \frac{6\pi n}{4} \right)$$

$$= \frac{2}{\pi n} \left(\sin \frac{\pi n}{2} + \sin \frac{3\pi n}{2} \right) = \frac{2A}{\pi n} \sin \frac{\pi n}{2}$$

9
